Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 19 April 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 10, 13, 15, 16, and 22 are rejected under 35 U.S.C. 102(b) as being anticipated by Vallet (4791986).

Vallet discloses a one-trip method of tensioning and sealing a tubular string 14 to a wellhead 10 comprising running the string and a seal 24 into the wellhead 10; securing the string downhole, via locating pin 36; securing the seal to the wellhead (fig. 4); applying and retaining a tensile force on the string (col. 3, lines 56-57) after securing with pin 36; pulling a tensile force before positioning the seal (hanging on hook 42); advancing the seal after pulling of the tensile force (col. 3, lines 54-64); using a running tool 44; securing the seal to a hanger 18; and securing the hanger and seal to the wellhead.

Allowable Subject Matter

Claims 3-9, 12, 14, 17, and 18-20 are allowed.

Claim 21 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicants' arguments filed 19 April 2006 have been fully considered but they are not persuasive. Applicants states Vallet's pins 36 are in the wellhead and not located downhole. The examiner notes the claim states "securing the string downhole" implying the tubing 10 is secured, not the seal. Thus, Vallet anticipates the claims since packer 16 at the end of the string 14 is secured downhole before packed off. The examiner further notes applicants' ratchet is located at the surface wellhead, not downhole, similar to Vallet pin 36.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Emmerson (7025145) shows a tensioning arrangement for a wellhead.
